

Search API Modules

NAME	DESCRIPTION
Current Search Blocks (current_search)	► Provides an interface for creating blocks containing information about the current search.
Database search (search_api_db)	► Offers an implementation of the Search API that uses database tables for indexing content.
Display Suite Search (ds_search)	► Extend the display options for search results for Drupal Core or Apache Solr.
Location Search (location_search)	► Advanced search page for locations.
Search (search)	► Enables site-wide keyword searching.
Search API (search_api)	► Provides a generic API for modules offering search capabilities.
Search API autocomplete (search_api_autocomplete)	► Adds autocomplete functionality to searches.
Search API Multi Aggregate (searchapimultiaggregate)	► Provides a data alteration callback for Search API.
Search Facets (search_api_facetapi)	► Integrate the Search API with the Facet API to provide faceted searches.
Search Views (search_api_views)	► Integrates the Search API with Views, enabling users to create views with searches as filters or arguments.
